

Task 1 – Financial Analysis with Tableau

The first task is intended as your starting point for your work with Tableau. You will perform a financial analysis using financial ratios. The scope is limited – one DAX40 company of your choice for one year. The idea is that you gain some hands-on experience in evaluating a company's financials and have an opportunity to familiarize yourself with Tableau using a real task. Later tasks will build on this.

The dataset you receive is not perfectly cleaned or pre-structured – this reflects the reality of financial data. The file contains more data than you need. It is your responsibility to identify and use the relevant information. See the file *Dataset Glossary* for the description of the data.

Instructions:

1. Choose a DAX40 company

Begin by selecting one of the DAX40 companies from the provided data set.

2. Analyze financial statements using different ratios

To gain a comprehensive view of the company's financials, start by analyzing the ratios introduced in the lecture for **the most recent year**. Calculate and analyze **at least 2 ratios per ratio category** (activity, profitability, solvency, liquidity). You may add further ratios if you think they provide additional insight.

Please use Tableau to calculate the ratios. Please work directly with the dataset we provide. **Do not adjust or “clean up” the data or use other files.** This ensures that your results remain reproducible and comparable.

3. Visualize your analysis in Tableau

Create a Tableau dashboard to illustrate your findings. The dashboard should be visually appealing, easy to interpret, and convey your key insights about the company's financials.

4. Documentation – Give an investment recommendation

Your documentation should include:

- **Company choice:** Why did you pick this company? What challenges and insights do you expect?
- **Method & ratios:** Which ratios did you calculate and why? Did you face any challenges (e.g., missing values, misleading naming)?
- **Results:** What do the ratios tell you about the company's financials? Interpret the results and find potential explanations.
- **Investment recommendation:** Based on your analysis of the company, what is your final assessment? Would you invest in the company or not?

Your documentation should not exceed **3 pages**. Please focus on presenting the key points in a concise and structured way.
